■ What our Clients say:

"Bringing in a specialist can be of considerable concern when dealing with valued, sensitive clients. The friendly and attentive service provided by Above All alleviated those worries and helps keep our clients happy."

"The difference to these areas now the tiles have been cleaned is remarkable. The tiles look like new and the ambience of the area is a lot brighter."

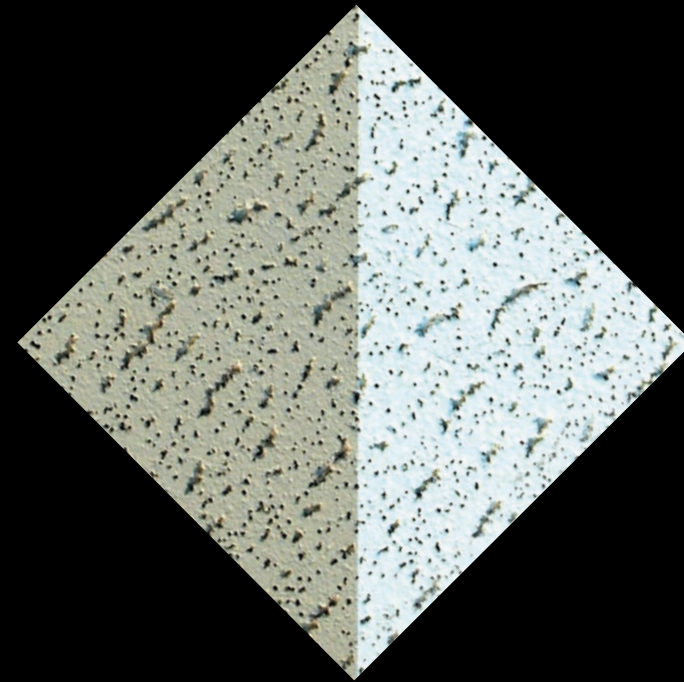

"A professional attitude was maintained at all times and I would have no hesitation in recommending Above All for any future projects."

"Apart from a nice clean ceiling, you wouldn't know anyone had been."

Suspended Ceiling Restoration

SAVES COST, TIME AND ENERGY

THE LOGICAL ALTERNATIVE TO SUSPENDED CEILING REPLACEMENT

Suspended ceilings are expensive to have installed. We restore them in situ at a **fraction of the cost** of new ceilings giving typical savings of 50-80%.

Our processes cause **less disruption** than replacement and **avoid the hazards and disadvantages of painting**.

THE LOGICAL COMPANY FOR SUSPENDED CEILING RESTORATION

Since becoming established in 1983 we have treated over a million square metres of

suspended ceilings. Clients **across the UK** range from international finance, retail and hotel groups to government departments and one-off shops and offices.

Site survey, recommendations and competitive quotations are supplied **free of charge**.

Working at a time most **convenient to yourself** we cover furniture and fittings, mask out walls, lights, sprinklers etc and use the specialised coating or cleaning process most suitable. Repairs and replacement of damaged or missing tiles can be carried out at the same time.

Our detailed quotation gives full information regarding the recommended specification, number of repairs or replacements and programming information.

The extracts from customers' letters on the back of this brochure are testament to our **high standard of workmanship and service**.

ENVIRONMENT Restoring ceilings saves the unnecessary waste and dumping of materials such as paper, metal, fibreglass etc. which occurs as a result of replacement of suspended ceilings and also restores light reflectance, allowing less lights to be used.

FISSURE-TEX® is the acoustic coating used for the restoration of discoloured mineral fibre suspended ceilings. It will restore the colour of both tiles and gridwork and is available in white or most colours to order. Fissure-Tex will maintain class 'O' fire rating when tested in accordance with B.S. 476 parts 6 and 7, maintain natural texture, improve light reflectance and allow tiles to absorb sound. Fissure-Tex avoids the hazards of painting and the high cost of suspended ceiling replacement.

FISSURE-CLEAN is used for the maintenance cleaning of mineral fibre suspended ceilings. Gridwork and ventilation grilles are cleaned at the same time. Fissure-Clean will not adversely affect fire rating or acoustic value. Fissure-Clean has a sanitizing effect on the surface of suspended ceilings and helps to give a brighter, healthier environment.

SPA-COAT is the coating used to restore discoloured steel, plastic faced and aluminium suspended ceilings. It is available in high sheen and low sheen finishes in white or most colours to order. Spa-Coat will maintain Class 'O' fire rating, improve light reflectance and maintain perforations or surface texture. Spa-Coat Low Sheen helps disguise surface irregularities, especially on older ceilings. Restoration with Spa-Coat avoids the disadvantages of painting and the high cost of suspended ceiling replacement.

SPA-CLEAN is used for the maintenance cleaning of steel, plastic and aluminium suspended ceilings. In common with other Above All treatments Spa-Clean will not adversely affect fire rating or acoustic value.
